A Bluewave Group Company

We aim to improve your business by helping you take the office to the customer - not the other way round.

Keeping you in touch whilst on the move!

We aim to improve your business by helping you take the office to the customer - not the other way round.

BE Systems understand the requirements of a mobile business - after all, we're one ourselves.

We understand that you need to provide your mobile workers with the right information, at the right time. We also understand that mobilisation isn't just about dumbly pushing mail out to a device.

Today's mobile workforces demand the same support, management and flexibility as your desk based workers.

Using advanced software and a wide range of hardware, BE Systems are able to provide the right mobile infrastructure for your organisation.

HOW THIS IS ACHIEVED

- Proven track record
- Proven experience with skilled expertise in technical infrastructure, sophisticated programming, design and project management resources.
- Solid partnerships with key suppliers
- Wide industry knowledge and involvement

THE BE SYSTEM DIFFERENCE

- Low cost of provision
- Maximizes benefits of mobile solution ownership
- Highest quality of support
- Best of breed build quality
- Simplest and most flexible licensing policy
- Unparalleled commitment to customers
- Access to professional services
- Solutions independent of device, mobile network and connection method

The best Notes/Domino mobile and wireless messaging solution available anywhere!

We provide the best of both worlds, through an interface you are familiar with, to provide PIM (email, calendar, tasks and contact information) and custom application access on the move. There's no need to cradle devices to synchronise, or worry if data is up to date.

A mobile infrastructure deployed by BE Systems allows your mobile employees to use commonly available Pocket PC, Palm or Symbian devices to access your existing Lotus Notes infrastructure.

You have constant and secure access to your Lotus environment where ever you are.

Turn dead time into productive time for mobile workers who need to access and interact with Notes mail, meetings, contacts and tasks while on the move.

LOTUS NOTES FOR PDA AND SMARTPHONE

Function

- Provides highest level of Notes functionality for wireless email, calendar, contacts, tasks (to-dos) and journal management
- Wide choice of devices, connection methods and platforms including Windows Mobile, PalmOS and SymbianOS
- Integrated Lotus Instant Messaging client
- The new mNotes Meetings delivers unparalleled meeting management capabilities

DEVICE MANAGEMENT

Business benefits

- The IT/IS function remains focused on business needs rather than deployment or maintenance logistical issues

- Users remain focused on their core tasks rather than the technology
- Accelerates deployments of any size using 'Over-the-air' capability and minimises impact on human resources
- Mitigates project risks through development of high user advocacy
- Reduces 'return to base' instances and associated costs that would ordinarily be caused by loss of data, device power or functionality faults

Function

- Provides full asset, availability and deployment management while most competing management products only offer software distribution functionality
- Aids proactive support of users and their devices
- Reduces cost of ownership with centralised:
- Asset Tracking and License Management
- Configuration and Content Management
- Disaster Recovery
- Remotely, and optionally remove unauthorised applications
- Notification services: e.g. remote kill, virus definition/application remote deploy and update (not 'fire and forget')
- Communication optimisations: e.g. scalability, automatic lowest cost connection seeking (e.g. Wi-Fi instead of GPRS), failover, load balancing, session continuance, point-of-failure restart, compression

ON-DEVICE SECURITY

BUSINESS BENEFITS

- Reduces risk by protecting against leakage of sensitive enterprise data whether by accident or malicious intent
- Protection against legal liability, corporate espionage and financial loss, via remote removal of confidential data from lost or stolen devices
- Facilitates regulatory compliance with Sarbanes-Oxley, HIPAA etc. reduces threat of negative publicity for disclosure or fines for non-disclosure

Function

- Enforces security policies on the device
- Broad platform support including Windows Mobile PPC/Smartphone, Palm OS and Symbian OS
- Reliable and automatic data protection, without downgrading the user experience
- Protection whether on the device or removable storage media using centrally-controlled, policy-based security
- Remote data destruction if device is lost, stolen or subject to misuse
- Can be used in conjunction with other mSuite products

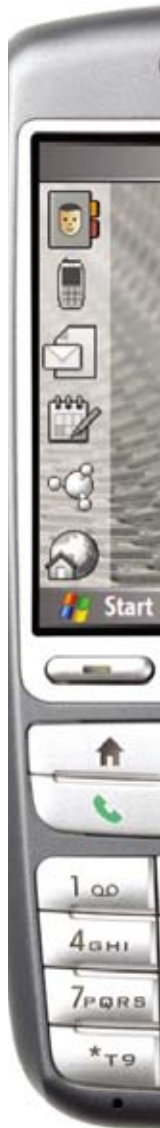

MOBILE APPLICATION DEVELOPMENT

BUSINESS BENEFITS

- Accelerates mobility return on investment. Improves effectiveness where business processes depend on pen and paper by providing efficient data collection and validation with mobile devices
- Reduces business costs by capturing accurate data at source with mobile data capture processes, eliminating wasteful re-keying of hand-written information
- Enables an enterprise to go from development to deployment in days rather than months
- Permits easy development with either the help of a CommonTime authorised business partner or 'do-it-yourself'

FUNCTION

- Allows development of fully functional graphical mobile applications in Domino Designer, leveraging existing Notes skills
- Supports Notes @Formula language which is executed on the client, providing the ability to easily implement business rules and logic where the data is being entered

A solution to suit your every need

In order to enable you to fully mobilise your workforce, **BE Systems** can provide you with a complete set-up, installation and maintenance package.

Available as follows

- Full mobile infrastructure deployment
- 10 user license for PIM mobilisation
